

Supplemental Assignment 3

EDH7916 | Summer C 2020

Benjamin Skinner

Scrape the NCES Table 501.80 and make a graph that answers the following question:

How do unemployment rates among 25-64 year olds of various education levels (less than high school, high school completion, some college, and Bachelor's degree or higher) compare and change from 1975 to 2017?

You **do not** need to save the final output as a data file: just having the final result print to the console is fine. In addition to making a graph, show your data work and give a one paragraph explanation of your findings.

Submission details

- Upload your script (<lastname>_supplemental_assignment_3.R) to our CANVAS course site no later than 11:59 p.m. EDT on the due date.
