Supplemental Assignment 1
EDH7916

Benjamin Skinner

Choose one of the **Other** data sources shown at the bottom of the the first supplemental lesson on getting higher education data from common sources[1] and create a Markdown document that does two things:

1. Explains the source and its usefulness for higher education research (one paragraph)
2. Gives step-by-step directions with links and screenshots on how to find and download the data

NOTE: A couple of the **Other** sources are general links to organizations with a number of data sources (*e.g.* the Bureau of Labor Statistics). Choose **one** data source if there are more than one.

A good document will include:

1. Clear instructions for finding and downloading the data without missing steps
2. Properly formatted links that work
3. Screenshots that either
    1. Include boxes, arrows, and text to help the eye
    2. Include *very* detailed captions/notes that explain where to look, what to click, *etc*
4. A clear connection to higher education research

Submission details

- Save your document (`<lastname>_supplemental_assignment_1.md`) in the `assignments/` directory along with the necessary images. I would recommend creating an `images` subdirectory in the `assignments` directory (*e.g.*, `assignments/images`), saving your screenshots there, and linking them in your document using relative paths. The compiled document (same file name: either `.html` or `.pdf`) can also be included.
